

CareEvolution Implements VeoProject Web-Based Project Management Software

Healthcare Technology Firm Uses VeoProject To Lower Costs And Effectively Manage Internal And Client Projects

CareEvolution understands managing projects with distributed teams. As a healthcare technology firm that integrates electronic medical records across disparate healthcare providers, every one of its projects requires coordinating the work of multiple client teams in separate offices. Adding to the challenge, CareEvolution's development and implementation teams are spread across half a dozen locations. CareEvolution utilizes VeoProject to keep its distributed teams executing smoothly.

Client Projects: VeoProject organizes tasks, dates, and resources into online project plans and issue trackers. The online documents are easy to develop collaboratively and provide immediate access to the latest version.

"VeoProject is much easier to set up than MS Project," said Dr. Vik Kheterpal, Principal with CareEvolution. "But the critical difference is having everything on the web so we can collaborate with customer teams without requiring extensive license and training costs for them."

Task	Resource	Start	Finish	Status	%
Infrastructure & Application Setup		8/4/2008	10/17/2008	this is the status	62%
Server/Network/Security Infrastructure	Jan	8/4/2008	9/19/2008	this is complete	100%
Application Installation		9/22/2008	10/17/2008	this is complete	25%
Installation of DataServer Software	Steve	9/22/2008	10/17/2008	demo	50%
Installation of WebUI	Steve	9/22/2008	10/2/2008	this is the status	0%
Full System Security Validation	Amy	9/29/2008	10/9/2008		0%
Production Implementation		10/28/2008	11/24/2008		0%

A VeoProject Plan

In addition to managing project plans and other project information, VeoProject can send task reminders and notify team members when the plan changes or status updates are entered. Reports make it easy to see past due items, overcommitted resources, or pending work across projects.

"Our project meetings are much more productive using VeoProject," explains Kheterpal. "With our teams spread across the country, VeoProject has become the tool that drives us to focus and deliver on time."

Internal Projects: CareEvolution also uses VeoProject to manage its technical wiki, track product issues and manage deliverables for upcoming product releases. Technical teams operating in different time zones can effectively coordinate work without investing in additional software or infrastructure.

VeoProject Benefits

- Easily create, customize and share project plans and issue trackers.
- Collaboratively manage projects.
- Make all project information easily accessible to all members of the team.
- Drive accountability with automated reminders and status reports.
- Make better decisions about your project with customizable reports.

VeoProject's core web documents work as spreadsheets with a collapsible outline structure. Configurable columns and "edit-in-place" rows make VeoProject highly versatile and easy to use in a wide variety of applications. The outline structure, customizable reports and other project-specific features allow teams to effectively organize and prioritize work items.

"We looked at a number of different solutions, but VeoProject's flexibility made it the easiest package to match up to our agile development processes," said Dan Ott, Senior Architect with CareEvolution.

Veoproject Data Sheet

Veoproject is a web-based project management software package that integrates project planning, issue tracking, time tracking, and document sharing into a rich collaboration framework.

Veoproject is for business teams that want advanced collaboration features such as online documents, file sharing, automated reminders and email integration. Veoproject integrates collaboration into robust project management functionality including: hierarchical project plans, drag/drop Gantt charts, powerful reporting, calendars, wikis, templates, and rich customization.

Veoproject subscription plans offer a free solution for small teams as well as graduated utilization-based pricing that scales up to enterprise teams. You can fully evaluate Veoproject online without commitment.

Veoproject Features

Organize Tasks and Issues: Start simple and add hierarchy, dependencies, colors, properties, and more as your project requires.

Drive Accountability: Send automated email reminders and status newsletters as well as enter status updates via reply email.

Easy File Sharing: Attach files to any task or create a file sharing page for your project.

Gantt Charts & Calendars: Visualize your work items effectively with these time-based editors.

Project Wikis: Link together online documents to organize and share your project information.

Project Templates: Start new projects quickly by copying existing plans or task lists.

Powerful Reporting: Understand the big picture with customizable reports across projects.

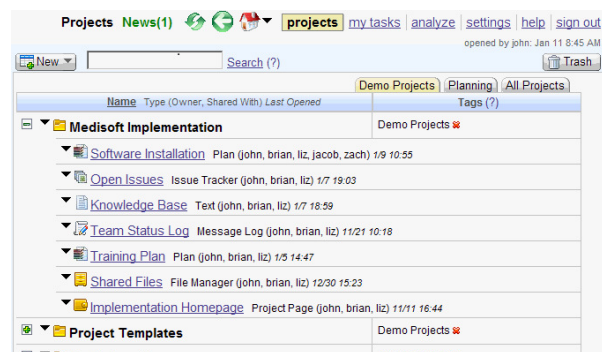

Import/Export Features: Import existing data from MS Project, Excel or other project tools.

100% Web-Based: Secure and always backed up. No hardware or software for you to maintain.
